Technical specifications

Aluminium sliding hatches with spans up to 15m

Stainless steel hand winch

Rails in blasted, metallised steel with epoxy coating

Single or double ridge

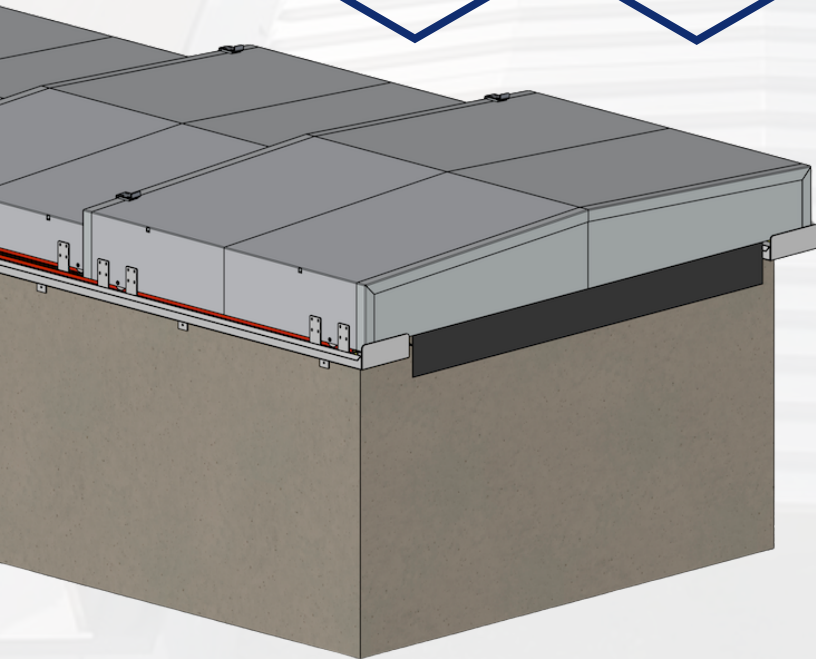

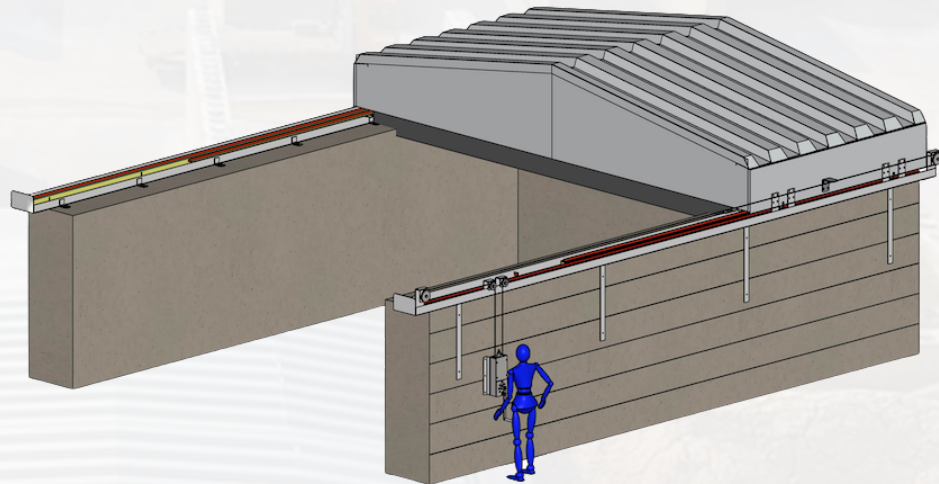

Rail system also usable as a drainage channel for rainwater

System for wind protection

Expandable, mobile, long service life, recyclable

AISI 304 stainless steel wheels on each hatch

Corrosion-resistant materials (stainless steel, metallisation)

Opening 100%

Maximum utilisation through a roof opening of up to 100%.

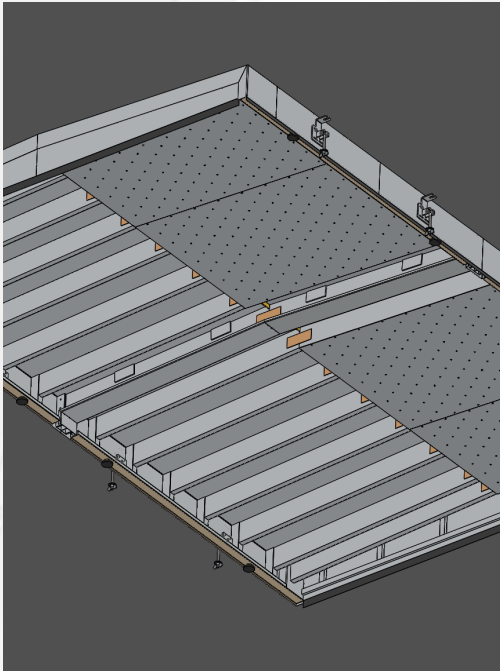

Shields

Front and/or rear shield are available.

Gate

Aluminum gates can also be delivered.

Isolation

Different types of isolation are available.

Concrete blocks

Blommaert is also the right address for concrete blocks.

Electric operation

The roofs can be operated manually or electrically.

Install thin, lightweight solar panels on your mobile sliding roofs and reduce your CO2 emissions. This way, you contribute to greening, drastically reduce energy costs and make multifunctional use of your space.

Save smartly

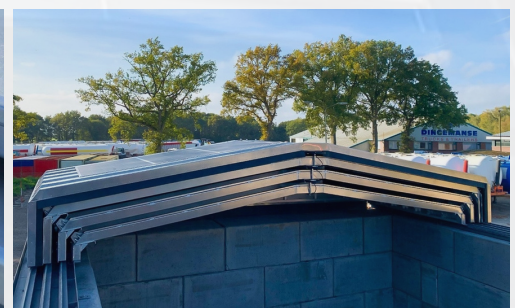

Choose integrated solar panels on your mobile roof and save money immediately. Experience the return on investment through the production of free, clean energy.

Go green

Store your products with the power of the sun. Prepare for the new and increasingly stringent sustainable building standards.

Save space

The solar panel system is fully integrated into your mobile roof. By making double use of the roof surface, no additional space needs to be made available for solar fields.

Highest quality

Highly efficient and robust design with dirt-repellent panels. Designed for any kind of storage and transfer.

Plug & play system

Designed to be easily and quickly connected by your electrician.

Stackable & interchangeable

The system uses light and thin solar panels so that (existing) sliding roofs do not need to be modified.

Mounting on existing structures or integrated in fixed roof constructions

We help your company move towards a more environmentally conscious future

Aluminium is strong, light, durable, environmentally friendly and recyclable

Wide range of applications

Do you want to store bulk goods in a dry environment, but still want to load and unload easily?

Agriculture, recycling, biomass, road building, public services, etc.

Sand, recycling materials, salt, wood chips, wood pellets, manure, straw, compost, fertiliser, sludge, asphalt, etc.

Storage of aggressive materials

We design and build a roof that is extremely resistant to environmental factors.

A roof that lasts for decades: designed to withstand wind and weather

Our roofs are not only practical, but also extremely durable and sophisticated.

We can also provide the hatches with a specific coating to make them fire-resistant, for example.

Completely tailor-made

Every Blommaert roof is unique and is produced and installed entirely according to the customer's wishes.

In addition, a static calculation can be made for the entire construction.

Modern machinery in accordance with EN 1090

We also have a strong and extensive engineering department which gives us a wide range of experience to help realize your project. Our assembly department ensures correct and safe installation.

Aftersales

Blommaert guarantees an excellent after-sales service. Our maintenance engineers are available 24/7 to assist you at any time of the day.

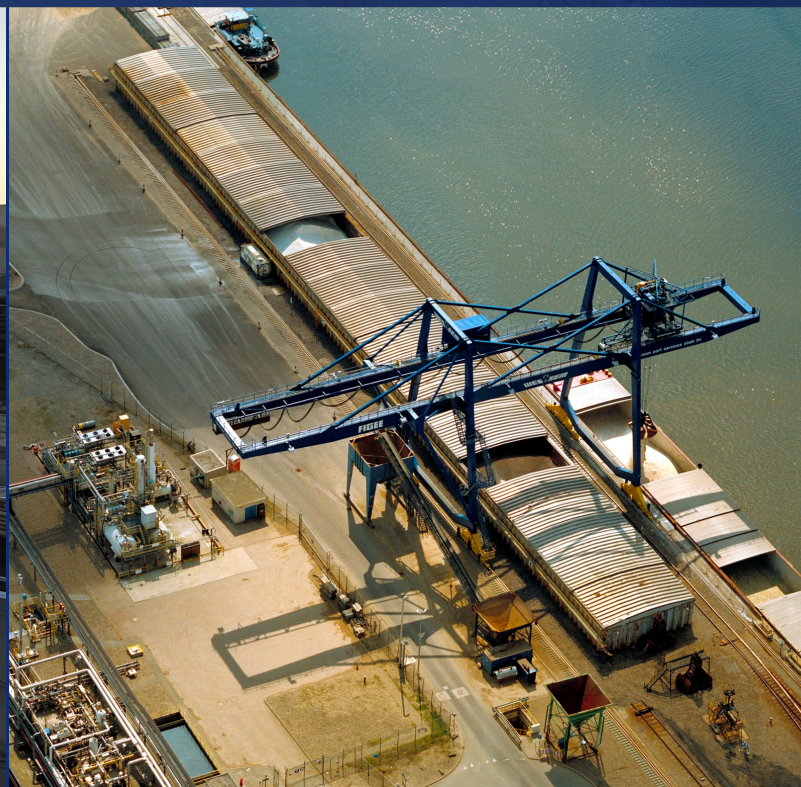

ABOUT BLOMMAERT

Blommaert nv has been a specialist in sustainable and future-oriented aluminium applications since 1978. More specifically, we focus on sliding hatches and aluminium constructions for industry. We are also market leader in the production of aluminium hatch covers for inland shipping. Blommaert is active worldwide with over 75 employees in two locations, in Wijnegem and Rotterdam.

Blommaert is known for delivering complete packages. As an integrated production company, we always make our products to measure, completely according to the customer's wishes. Our goal is to relieve the customer of all his worries. With this in mind, we are also responsible for contacts with engineering firms and interim consultations with and coordination of the subcontractors.

Building on our expertise in inland shipping, over the years we have also added aluminium structures for industry to our range, supported by advanced machinery. You can also count on our engineering department to assist you in the realisation of your project. Our own assembly service ensures correct and safe installation.

Blommaert also guarantees an excellent after-sales service by having its own maintenance technicians on standby 24/7 to assist you at any time of the day. Customisation, high-quality materials, innovation, an eye for detail and professional service are the common denominators of our service.
